

NARROW 350 SERIES AIRBLAST

500 and 600 gallon 8 inch frame model 350 series units can be ordered in the special narrow configuration.

To build the sprayer narrower, the wheel wells are indented into the tank on these models; they are reinforced to insure they do not affect the integrity of the tank.

The narrow version allows both 500 gallon and 600-gallon units to have the following width based upon the tire chosen:

Standard tire on both the 500 and 600 gallon units is the 12.5L x 15SL – in the narrow version this results in a outside tire to outside tire measurement on both the 500 and 600 gallon units of 62 inches, only 1 inch wider than our 400 gallon narrow.

In the upgraded 14Lx 16.1 version with heavy duty 2 ¾ inch 8 bolt hubs, the width on both the 500 and 600 gallon units is 67 inches outside tire to outside tire, including the wider axles. This is still 10-12 inches narrower than the competition.

For details on these machines other than the indented tank and narrow configuration, please see the brochures for the equivalent sprayer in the standard width.
